

SHIELDCOAT[®]

Layers of protection you can count on

Weatherproof Your Roof!

Your roof is exposed to extreme weather daily that causes it to expand and contract. This can cause your roof to buckle, split, or lose adhesion to the surface below.

Prepare your roof for the changing seasons with the **KM SHIELDCOAT® ROOF SYSTEM**, a lightweight and flexible elastomeric coating system. The **KM SHIELDCOAT ROOF SYSTEM** forms a dynamic, water-tight, seamless membrane to protect your roof against leaks and allows the roof to stretch and return to its original shape over and over again.

What is the KM SHIELDCOAT ROOF SYSTEM?

The **KM SHIELDCOAT ROOF SYSTEM** is a liquid applied waterproofing system intended for new and existing roofs. This water-based, acrylic system is applied in multiple layers to provide a reinforced membrane that conforms to existing site conditions, resulting in a fully-adhered seamless roof.

The **KM SHIELDCOAT ROOF SYSTEM** is a layered, durable and seamless roof system that consists of:

- **KM Primebase** – a grey-tinted water-based elastomeric coating designed to protect and seal a variety of roof systems
- An embedded layer of **KM Polyester Fabric** with elevated strength and elongation properties
- **KM Finalcoat** – a water-based elastomeric coating designed to provide protection from UV and other weather exposures

For optimum results seal joints, vents and roof mounted equipment with KM Acrylicalk. Existing roofs require detailed analysis to determine the most appropriate layers of protection.

FAQ – The KM Shieldcoat Roof System

What are the approved substrates?

- Modified Bitumen
- Metal
- Single Ply Membranes
- Concrete
- Wood
- Existing BUR

What colors is the KM SHIELDCOAT ROOF SYSTEM available in?
